                                                                                                                                                                              The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3 and 5 ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polypeptides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first CDNA sequence of the BAP28 gene consisting of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization or polymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Barry C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    04-JAN-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Misc-difference

Also described are: a recombinant expression vector comprising the nucleic acid, soing the recombinant expression regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a

```
the 6213 antisense squences given in the specification where expression (C (1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are: (2) of the nucleic acid inhibits promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense c nucleic acid; (2) a host cell containing the vector; (3) an isolated containing the vector; (3) an isolated containing the polypeptide of specifically binding c the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of crequired for proliferation, or that has an activity against a biological pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a culture compound that inhibits proliferation of an organism acts; (1) identifying a natibiotic; (10) profiling a compound to which each of the strains is present in a culture or collection of an organism. The antisense nucleic acids are useful for cellular proliferation of an organism. The antisense nucleic acids are useful for cellular proliferation to isolate candidate molecules for rational correquired for proliferation to isolate candidate molecules for rational correquired for proliferation in cells other than S. aureus, S. typhimurium, C. Experiment did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the target prokaryotic essential genes. Note: The sequence data for this can be attended to proliferation format of the printed specification, but was obtained con an electronic format directly from WIPO at

```
CC polypeptides encoded by the genes are used for detection/identification (CC of P. luminescens, e.g. in foods. The genes, proteins, Ab and cells that CC carry a gene-containing vector are used to select compounds that CC modulate, regulate, induce or inhibit expression of the genes in plants, CC animals or microorganisms other than P. luminescens and are able to alter CC response or sensitivity to toxins and antibiotics produced by P. CC luminescens. Cells transformed to express the genes are useful for CC recombinant production of the proteins, particularly toxins and antibioters proteins, vectors containing the genes and Ab are also useful CC antibacterials useful as insecticides, bactericides and fungicides. The CC genes, proteins, vectors containing the genes and Ab are also useful CC therapeutically (to treat microbial infection by bacteria or fungi that CC are sensitive to P. luminescens-encoded toxins or antibiotics) and as CC biopesticides. Other uses of the genes and the proteins are as virulence factors and foor identifying targets of human diseases for which P. CC luminescens is a model (particularly plague and whooping cough). This sequence represents one of the isolated P. luminescens proteins
                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymuclectides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial drugs or as blo-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Proteus mirabilis polypeptides and polynucleotides, useful as reagents for diagnosis of bacterial disease, as components of antibacterial vaccines, as targets for antibacterial drugs, or as biocontrol agents for plants.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 473 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention

                                                                                                                                      Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
The invention relates to polynucleotides encoding
                                                                                Disclosure; SEQ ID NO 20403; 455pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to new Proteus mirabilis polypeptides and polypeptides. The invention also relates to antibodies against the polypeptides, methods for producing the polypeptides, a method of generating vaccines for immunising an individual against P. mirabilis, a method for evaluating a compound for the ability to bind a P. mirabilis polypeptide and a method for screening test compounds for anti-bacterial activity. The polypeptides and polymucleotides are useful as molecular targets for diagnosing, preventing and treating pathological conditions resulting from bacterial infection, as reagents for diagnosis of bacterial diseases, as components of antibacterial vaccines, as targets for antibacterial drugs or as bio-control agents for plants. This sequence represents a Proteus mirabilis polypeptide of the invention.

                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-P. aeruginosa drugs, as templates for recombinant production of P. aeruginosa drugs applies or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (KAGA-)
                                                                                                                                                                                                                         This invention describes a novel gene (AtMIDIB) encoding an extension-
activated calcium (Ca2+) permeable channel of higher plant, useful for
controlling gravity tropism in plants. The gene is useful as gravity
sensor in plant. Transgenic plants containing the gene have improved
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel AtMID1B gene derived from Arabidopsis thaliana encoding extension-
activated calcium permeable channel, useful for maintaining gravity
tropism in plant.
                                                                                                                              Sequence
                                                                                                                                                                                                 photosynthetic ability.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        á
                                                                                  complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprises a sequence complementary to a
coligonucleotide which comprises a 3'-end sequence, where the
polynucleotide comprises at least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
detection and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893
represent human amino acid sequences, and AAH13629 to AAH13632 represent
coligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ota T,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                           ANY49137-Y49152 are amino acid sequences that are fragments of choline combining proteins (CBP). The fragments of the protein are the alpha helix combining parts of the CBPs from Streptococcus pneumoniae. The polypoptides combine to contain the actual choline binding fragment. The polypoptides and the nucleotide sequences that encode them (AAZ31077-Z31092) are used in the invention, which relates to polypoptide truncates of a pneumococcal curface binding protein containing the highly conserved immunogenic alpha combines because the first polypoptide are used for preventing (immunising) or treating invasive bacterial (especially conserved). Infections, especially otitis media (caused by pneumococcal) infections, especially otitis media (caused by pneumoniae), sepsis, meningitis and lobar pneumonia infections. CC prevention (passive immunity) and treatment of S. pneumoniae infections. CC prevention (passive immunity) and treatment of S. pneumoniae infections. CC with an immature immune system, or patients with an on going pneumococcal confection against a range of pneumococcal serotypes and it produces an configuration against a range of pneumococcal serotypes and it produces an improved and enhanced effect in preventing bacterial infections.

      Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    D B D

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

Claim 8; SEQ ID NO 11159; 2537pp + Sequence Listing; English.

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialized methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Unidentified
Claim 20; SEQ ID NO 1078; 1177pp; English.
                                              New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                   WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                       12-APR-2002;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present amino acid sequence represents a protein
                                                                                                 The sequence is that of a protein which can be used in the preparation of the recombinant breast cancer antigen, BRCAI, binding proteins BARDI, B123, BE2, BE14, BE31 or BE445, or a composition for the detection of a BARDI, B123, BE2, BE14, BE31 or BE445 mucleic acid sequence, specifically a wild type BARDI composition for the detection or purification of BRCAI, useful to identify a patient having, or at risk of developing cancer. BARDI can be used in the preparation of an anti-BARDI antibody, and in the detection and purification of a BRCAI protein. BARDI, B123, BE2, BE14, BE31 or BE445 can used in the identification of a binding protein agonist or antagonist that alters the binding of BARDI, B123, BE2, BE14, BE31 or BE445 to BECAI back to the binding of BARDI, B123, BE2, BE14, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE445, BE31 or BE44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1149 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BARD1; ring

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local
                                                                                                                                                                                   sequences and regulatory region located at the 3' and 5' ends of the BAP28 coding region. The BAP28 polypeptides can be expressed by standard recombinant methodology. BAP28 polypucleotides and polypeptides have been found to be over expressed in prostate tumour cells, therefore levels of BAP28 expression and/or activity may be assayed (e.g. by polymerase chain reaction (PCR)) to diagnose patient suffering from or susceptible to prostate cancer. Antibodies specific for the BAP28 polypeptides are useful as diagnostic reagents. Biallelic markers of the BAP28 gene are useful in genetic analysis. The present sequence represents a protein encoded by a first cDNA sequence of the BAP28 gene consisting of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New BAP28 polynucleotides and polypeptides overexpressed in prostate cancer cells for diagnosing prostate tumors, e.g. by hybridization oppolymerase chain reaction assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention is directed to BAP28 polypeptides, BAP28 polynucleotide sequences and regulatory region located at the 3' and 5' ends of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Barry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-JUN-1999; 99US-0141323P

                                                                                                                              polyadenylated RNA-binding protein or eukaryotic translation initiation factor 4 (eIF-4) gamma. The nucleic acid fragments may be used in PCR protocols to amplify longer nucleic acid fragments encoding homologous genes from DNA or RNA, to create transgenic plants in which the new polypeptides are present at higher or lower levels than normal or in cell types or developmental stages in which they are not normally found. The nucleic acids may also be used as probes for genetic or physical mapping the genes that they are part of and as makers for traits linked to those genes. The polypeptides may be used as makers for traits linked to those to facilitate design and/or identification of inhibitors of those enzymes that can be used as herbicides. The present sequence is rice poly (A) binding protein from clone rsr9n.pk005.117
                                                                                                         Sequence 655 AA;
                                                                                                                                                                                                                                                                                                                           Claim 9; Fig 1-3; 26pp; English.
                                                                                                                                                                                                                                                                                                                                                                   New polynucleotides encoding poly(A) binding protein or a eukaryotic translation initiation factor-4 gamma, useful for creating transgenic plants where the proteins are present at higher or lower levels than
                                                                                                                                                                                                                                                                                                 The present invention relates to an isolated polynucleotide encoding

The inventior useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1150 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23-MAR-2000; 2000US-0191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to novel genes (ABA11004-ABA21534) and proteins CC (ABB14678-ABB18001) useful for preventing, treating or amaliorating CC medical conditions e.g. by protein or gene therapy. The genes are CC isolated from a range of human tissues disclosed in the specification. CC The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC multiple sclerosis, rheumatoid attritis and ulcerative colitis; (c) CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic confections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of

                                                                                              probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                          Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 36

                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
                                                       Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension; hypaline membrane disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipodaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG5930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at
